

REVOLUTIONARY thinking techniques

S-E-M-I-N-A-R

In a world where the only constant is change and the doubling of available information causes continuous disintegration of the current business context and rules – the ability to think faster, better and innovatively is essential, and yet most of us are not future literate. Individuals and organizations are prisoners of old thinking patterns developed for a stable predictable environment...

The Revolutionary Thinking Techniques seminar
illustrates
how to unlearn old patterns and continuously relearn
new patterns of thought.

Program Objectives:

- To understand why we can no longer solve new and ever changing problems with old solutions.
- To understand the brain as a patterning system.
- To reflect on the thinking and learning culture of the organization.
- To learn practical revolutionary thinking techniques, constantly challenging established thought patterns in order to survive and excel.
